#078 P.006/019

comparing the characterized output to the target output characteristic;  
determining a correction factor to produce the target output from the inhaler; and  
configuring the controller to apply the correction factor to the inhaler.

16. (Original) The method of claim 15, wherein characterizing the output of the inhaler includes determining an ejected drop weight.

17. (Original) The method of claim 16, wherein characterizing the output of the inhaler includes determining the ejected drop weight as a function of drop frequency.

18. (Original) The method of claim 16, wherein characterizing the output of the inhaler includes determining the ejected drop weight as a function of medicament ejector temperature.

19. (Original) The method of claim 15, wherein comparing the characterized output to the target output characteristic includes comparing a determined ejected drop weight to a target drop weight.

20. (Original) The method of claim 15, wherein determining a correction factor includes determining a corrected drop weight.

21. (Original) The method of claim 15, wherein configuring the controller to apply the correction factor to the inhaler includes configuring the controller to apply a static correction factor.

HP Docket No. 200309745-1  
KH Docket No. HPCC 3B3

22. (Original) The method of claim 15, wherein configuring the controller to apply the correction factor to the inhaler includes configuring the controller to apply a dynamic correction factor.

23. (Original) The method of claim 15, wherein configuring the controller to apply the correction factor to the inhaler includes configuring the controller to apply a corrected drop ejection frequency.

24. (Original) The method of claim 15, wherein configuring the controller to apply the correction factor to the inhaler includes configuring the controller to apply a corrected number of drops ejected.

25. (Original) The method of claim 15, wherein configuring the controller to apply the correction factor to the inhaler includes configuring the controller to apply a corrected medicament fluid pressure.

26. (Original) The method of claim 15, wherein configuring the controller to apply the correction factor to the inhaler includes configuring the controller to apply a corrected ejector temperature.

27. (Previously Presented) The method of claim 26, wherein configuring the controller to apply the corrected ejector temperature includes configuring the controller to apply a corrected drop ejection frequency.

28. (Previously Presented) An inhaler, comprising:

- a means for supplying fluid medicament;
- a means for ejecting fluid medicament, the means having a performance characteristic;
- a means for accumulating fluid medicament in fluid communication with the ejector means;
- a means for sensing fluid medicament pressure within the accumulator means;
- a means for regulating an addition of medicament to the accumulator means from the fluid medicament supply means in response to the pressure sensing means;
- and
- a means for actuating the ejector means using an operational parameter calculated from the performance characteristic of the ejector means.
